the shoulder and a bullet grazed the  
head of a white woman.

Police Curb Outbreak

The negroes were overtaken and  
rescued from the mob by policemen.  
In the meantime squads of mounted  
police arrived in the district in antici-  
pation of trouble, and what was ex-  
pected to be the most serious outbreak  
of the night was averted.

Police wires were busy all night with  
pleadings from frightened women for  
protection. Many of them feared to  
leave the scene of action and they  
were terrified by the dramatic battles  
and feared their homes would be  
wrecked before morning.

Street lights along some streets were  
smashed and the streets darkened.  
Then the bright flashes from pistols  
would signify a new battle and in  
almost no time the immediate vicinity  
would be a swirling mass of whites  
and blacks. When they came together  
in large crowds, fists, knives and clubs  
were used.

One of the morning newspapers will  
place the estimated dead at 14, nine  
whites and five blacks, and another  
will place the number of dead at 13, 11  
blacks and two whites. The city news  
bureau places the dead at seven.

After a motorman had been dragged  
from his car and killed by a group of  
madmen, the situation shortly before mid-  
night and a dozen street cars wrecked,

the street car company ordered that no  
more cars be taken into the troubled  
area. The elevated trains also quit  
running in dangerous territory.

Troops continued to move to a cen-  
tralized point on the South Side  
throughout the night, but up to mid-  
night they had not been ordered to  
begin patrolling the streets. This was  
explained by the statement that the  
outbreaks had slackened to such ex-  
tent that the police could afford as  
much protection as the troops.

Hundreds of stenographers, clerks  
and loop employees who must pass  
through the black belt to reach their  
homes remained in the business dis-  
trict hotels and at North Side lodging  
places.

Poolrooms, moving picture houses  
and other gathering places in the black  
belt were ordered closed.

While the black belt was seething  
with strife, negro educators and  
churchmen sent out appeal after ap-  
peal that the negroes go to their homes  
and keep peace.

They charged that in most outbreaks,  
the negroes had been heckled by  
whites.

The disorders did not extend north  
to the business district, except for  
minor outbreaks.

## GIVES ADVERSE REPORT ON NEW IRRIGATION PLAN

Paradise - Verde Reclama-  
tion Project Reported Un-  
favorably by Water Ex-  
pert—Called Impractical

The Paradise-Verde irrigation project is commented upon unfavorably by Homer Hamlin of Los Angeles, consulting engineer of the reclamation service, in his report on the scheme as Franklin K. Lane of the department of the interior. A copy of the report was received from Washington and made public by the Water Users' association yesterday. Mr. Hamlin recently made an investigation of the project, and his report on it to the department deals a severe blow to the plan which would irrigate Paradise and Deer valleys from the Verde river.

In his report against the proposed project, Mr. Hamlin takes the stand that the project would be impractical. He puts the problem in the form of a choice of the new project involving expensive construction, a "totally inadequate water supply and a comparatively small seage, and the present Salt River project, with an area of 250,000 acres under intensive cultivation, but extended beyond the safe limits of its water supply.

In concluding, Mr. Hamlin advances his opinion that the statement that of the two possible uses of the waters stored upon the Verde, the water may be most advantageously used in the Salt River valley.

Mr. Hamlin in his report summarizes the salient features of the proposed project as follows:

The Paradise Project  
"Officials of the Paradise-Verde Irrigation district contemplate the use of water from the Verde river, Cave creek and New river for the irrigation of 95,000 acres of land in Deer valley, Paradise valley and adjacent regions.

"It is proposed to build the Camp Verde and Horseshoe dams on the Verde river, also dams on Cave and New river to store the flood waters of those streams, as a water supply supplemental to that from the Verde river. It is further proposed to build the loop diversion dam on the Verde river, a transmission canal 27.3 miles long, a distribution canal 23.6 miles long, and lateral canals and ditches for the purpose of delivering water to the lands within the district.

"Officials of the district further point out that in their opinion, flood water in Salt river could be conserved by the construction of a dam at Mormon flat; that there is an unnecessarily low duty of water in the Salt river project; that a large portion of the water diverted to that project is wasted and that large quantities of underground water within the boundaries of the Salt River project could be developed by pumping and used for irrigation on that project.

"They maintain that if additional storage were provided on Salt river, the alleged low duty of water and waste corrected, and more extensive pumping provided, that more water would be available for the irrigation of the Paradise-Verde Irrigation project."

"Conclusions:  
"The findings of this report are summarized in the following statements:

"1. The classification of lands within the district is as follows:

"Patented lands, 49,945.23 acres.

"Entered government lands, 30,460.24 acres.

"State lands, 14,764.00 acres.

"2. The design of the proposed dams is grossly in error and if built would be a serious menace to life and property in the district.

"3. Adequate structures for the development of the district cannot be built for the estimate submitted.

"4. The available water supply from the Verde river is inadequate for the irrigation of the district when actual diversions and use of water from Salt river are considered.

"5. The water supply from Cave creek and New river is small and intermittent. Development should not be based thereon until more accurate data are available.

"6. The storage of flood water at Mormon flat is not economically feasible.

"7. A general system of canal lining should not be required until it has been demonstrated that seepage losses therefrom are great enough to justify the cost of such work.

"8. It is to be regretted that this district has been proposed with no more substantial basis than the misleading, inaccurate and insufficient data submitted. The district is not considered feasible, both on account of the inadequate water supply and the cost of construction."

Following about 40 pages of typewritten report, Engineer Hamlin submits the following conclusions:

"The storage regulations of the present surplus waters of the Verde river constitute then, practically the only available water supply for the Paradise-Verde irrigation district, as it has been shown that the supply from Cave creek and New river is doubtful and unimportant, particularly during drought periods. The supply from the Verde river is seriously short for an area of 30,000 acres, and should not be considered for the development of an independent irrigation system unless supplemented by a ground water supply during a drought period.

"It is certain that such a ground water supply could not be developed in the Paradise-Verde district. When the cost of storage dams, diversion works, transmission canals and tributaries is considered in relation to the area benefited and the character of the water supply, it is not considered to be a feasible development.

"The study of the water supply of the Salt River valley based upon an area of 194,703 acres shows serious deficiency during a period of drought. A supplemental supply must be developed if the project is to pass successfully through a drought similar to that occurring between 1928 and 1934, a period of seven successive years, during which the precipitation and run-off were below normal.

"The rainfall record at Fort Apache in the drainage basin of the Salt river indicates three protracted periods of drought in the past 43 years. It is therefore reasonable to assume that there will be a similar recurrence of conditions.

"We have on the one hand a proposed new irrigation development involving expensive construction, a totally inadequate water supply and comparatively small areas. On the other hand we have an area of nearly 250,000 acres in the Salt River valley under intensive cultivation, but extended beyond the safe limits of its water supply.

"In consideration therefore of the economic merits of these two possible uses of the water stored upon the Verde river, it is the writer's opinion that these waters can be most advantageously used in the Salt River valley."

## MORE CORPORATIONS APPEAR ANXIOUS TO PAY UP THEIR FEES

The publicity recently given by The Republican to the fact that the corporation commission intends to insist that dissolution proceedings against those corporations in arrears in the matter of annual reports and fees continues to bear fruit.

Hundreds of letters are being received, dozens of remittances are coming in today, and according to A. E. Stelzer of the commission, the state will be saved much expense in the collections by means of this publicity.

Letters and remittances are being received from coast to coast, the story having been sent over the wire as well as published here. Many amusing incidents are coming to light. One woman who describes herself as "about all there is left of the company" wrote in to ask that she be left out of the proposed suit and enclosing two years' reports and fees. Another sent a telegram asking that action be delayed thirty days as all the officers of the corporation were away and would doubtless be somewhat discommoded to return and find their company had been dissolved into thin air in the meantime.

A bank sent in their report and fee for the past year and inquired if they were in arrears further back. They were. One man wrote that there were so many kinds of fees that he had lost track of them, but if his company were behind he would be glad to catch up. Others of equal interest are continuing to pour in—but Assistant County Attorney Caldwell is still working on the preliminaries of the dissolution proceedings.

## PHOENIX YOUNG MEN JOIN THE MARINES

Quite a number of the young men of Phoenix are taking advantage of the excellent opportunity offered by the U. S. marine corps for learning a good trade, and at the same time visiting some of the historic battle grounds of this famous fighting unit.

One of the features in the Rothaphel unit program, to be shown at the Columbia theater from July 31 to August 2, is an immortalization of the heroic stand of the United States marines at Belleau woods, showing the woods as it stands today, a sacred and a shell-ton memorial to the marines of America.

This picture will give young men desiring to join this branch of the service, an excellent idea of the class of men they will have for companions during their period of service in the United States marine corps.

## BACK FROM HEARING ON WINSLOW WATER

The corporation commission has returned from holding a hearing on water rates in Winslow. According to the chairman of the commission, A. A. Betts, the citizens of Winslow are well satisfied with the minimum rate of \$1.75 for the first 3,000 gallons, but desire that the rate per 1,000 above the minimum be lowered to 12 cents, from the present rate of 50 cents.

The water company is owned by the Santa Fe, and brings in a supply for both the railroad and the town from Clear Creek, a distance of six miles. The present rates were set a year ago when the meters were installed, the former flat rate having been \$3. At that time the consumption by the town was about 50 per cent, which had been reduced to approximately 12 per cent under the meters, but many residents feel that the rate is too high to justify the use of enough water to keep their lawns and trees in good condition, and consequently desire a lower rate.

REAPPOINT EMBALMING BOARD—The old state embalming board, that holds the examinations for undertakers and embalmers to do business in Arizona, has been reappointed by Governor Thomas E. Campbell. The board consists of A. H. McClellan and F. H. Jones of Phoenix and J. I. Reilly of Tucson. No date has been set for the next examination.

HOME FROM VACATION—Miss Alice Mosier of the Collins Vehicle and Harness company arrived home Sunday evening after spending a week's vacation at the Grand Canyon.

While in New York on his recent trip east, A. A. Betts, chairman of the corporation commission, looked up Wes Hill, of the Apache aerial company, and with Hill went to inspect the plane and motor being built for the company.

Officials of the All-Metal Airplane company, from whom the plane has been ordered, the greatest regret that they had been unable to deliver the machine sooner, but stated that it is now well under way, as the government has eased up in the matter of supplies of aluminum, the metal of which it is being constructed.

Mr. Betts inspected the motor being built, and was assured that a similar motor had been run experimentally, under full load, for four or five times the length of time any other airplane motor has ever been used without having to be overhauled.

Hill plans, now that the Atlantic City season will be ended before he gets the plane, to take it to Palm Beach for the winter before coming out to Phoenix. Mr. Betts says that the two companies that operated at Atlantic City this summer were busy all the time, charging \$25 for eight-minute flights, and that Hill believes as good a business can be done at Palm Beach this winter.

STATE COMMISSION  
INSPECTS FIELD

While in the northern part of the state the members of the corporation commission went to Holbrook to have a personal observation trip through the oil field under development there.

They were met at Holbrook by Former Governor Micklejohn of Nebraska, owner of the Holbrook Oil company, and were taken over the grounds.

They inspected the Hopi well, being drilled by the Wind River Oil company, and found it down 2,300 feet and still going, the red sandstone they are

## PRISONERS IN SECOND BREAK FROM CITY JAIL

Four Escape Through Ceiling in Simple Method—Police Recapture Two—Keep Close Lookout for Others

For the second time within the last two weeks, prisoners in the city jail forced an exit through the ceiling and made good their escape. The repetition of the affair a short time ago took place last evening at about 5:30 o'clock, and in the same spot as the previous affair.

The only difference in the method of leaving this time was that the prisoners did not stop to cut a hole through the ceiling, instead simply taking a piece of two by four nailed to the wall, and punched a hole through the newly repaired boards. About an hour after the break, B. O. Lenoir and L. E. Baker were recaptured by Officer Papo on South Seventh avenue. The other two who escaped, J. T. Caldwell, a negro, and L. D. Hollenbeck, were still at liberty.

It is thought by the police that Caldwell is the ring leader in the affair. He aided in the previous break, being recaptured shortly after. As soon as he gained his liberty last night he headed straight for the home of his wife, Marie Caldwell, a colored woman, frequently charged by the police with being a cocaine addict. As soon as he arrived at her place of residence, he administered an unmerciful beating, apparently for an unknown reason, and then departed. The Caldwell woman was herself in police court yesterday afternoon, being given the option by Judge Thomas of leaving town or spending 90 days in jail. She was in the midst of her preparations to leave when her husband called upon her.

One Made a Race. Quick Baker was at liberty, he managed in some manner to secure \$14.40. As he had no funds upon him when locked up yesterday, it is thought he had an accomplice waiting on the outside. It was also reported by other prisoners in the jail that Hollenbeck was armed with a pistol, shoved through the window of the jail during the day.

"It is inhuman and unsanitary to keep prisoners in the present city jail," said chief of police George Briscoe last night.

"As long as we have to let the men out of the cells for sanitary purposes it is going to be impossible to keep them behind the bars. It is the most unsanitary thing imaginable to keep them locked up in narrow cells all the time. The stench and pollution becomes terrible unless they are allowed the run of the cell block. We simply have to let them out, and then it is only a question of their kicking a hole in the ceiling and leaving us."

Were in on Varied Charges  
Baker was serving a sentence of 110 days for breaking glass in the city streets and driving an automobile while drunk. Caldwell was serving 50 days for vagrancy. Hollenbeck was being held for the department of justice and Lenoir was serving 30 days for carrying concealed weapons.

Every effort was being made by the police last night to locate the two men still missing. Freight trains were closely watched. At 9:20 a phone call came to the police station that a man answering the description of Hollenbeck had been put off the out bound Southern Pacific freight at Third street and Jefferson. Phone calls were sent to Tempe, Mesa and surrounding towns for the authorities there to be on the lookout for the fugitives.

ing through yielding salty swabbings. They expect to strike the Pennsylvania formation below the rock alluvium now drilling. The Holbrook Oil company has a 16-inch hole started and down 100 feet, with a rig installed that is capable of going 4,000 feet. In the opinion of the commissioners the field will be fairly tested by the wells now being drilled.

# DAIRY TALKS

## No. 2

The Dairyman Who  
Has Not Already  
Planted a Silage Crop  
Should Do So at Once

Contrary to the belief of some ranchers it is not too late to plant a silage crop, for unless there should be a very early fall, the crop will mature very satisfactorily. However, the crop should by all means be planted within the next 15 days.

The ground to be planted should be irrigated at once, and as soon afterwards as the ground can be worked. MEXICAN JUNE corn should be listed in rows 3 feet apart and 4 to 6 inches apart in the row, or HE-GIRA may be planted. The yield from MEXICAN JUNE corn should be from 12 to 15 tons of ensilage per acre, with possibly 20 tons under the best conditions.

Where the dairyman has no silo, plans should be made to start erection of the proper sized silo at once, so that by the time the crop is ready there will be a place to house it.

Dairyman who use ensilage seldom find cause for complaint at the size of their cream checks per cow, or from the test of butter-fat in the milk, for combined with grain, alfalfa roots, or cotton-seed meal, an ideal food ration can be maintained throughout the year, producing a copious flow of milk, rich in butter-fat. A product most satisfactory to the dairyman and the creamery as well. The creamery would much rather purchase at a HIGHER PRICE, a less volume of milk with a greater percentage of butter-fat, while by proper feeding a dairy herd may be made to produce, 20% or even more revenue to the dairyman without any addition to the investment in the cows.

Since an ensilage crop is a "short-lived" one, being produced, harvested and out of the way in a very short time, it can readily be seen that the returns of such a crop for the investment involved is very great.

We would welcome any suggestions as to any other silage or late feeding crops from, practical dairymen. Feel free to address this department at all times, telling your problems or sharing your knowledge of the business.
